

SoundPost Bridge

SoundPost Automating Association Accounting at Scale

Association finance teams are under pressure to close faster, pass audits with confidence, and deliver timely insights, but many remain burdened by manual reconciliations and spreadsheets. **SoundPost Bridge** changes that dynamic. Purpose-built for associations, it transforms fragmented transactions into clean, auditable financials with automated workflows from start to finish.

The Challenge: Disconnected Systems and Manual Work

Finance leaders often deal with a patchwork of systems such as AMS platforms, eCommerce solutions, event registration tools, and accounting software that rarely communicate smoothly. This fragmentation forces teams to rely on manual exports and data mapping, leading to recurring headaches with deferred revenue schedules, reconciliation, and month-end close. These inefficiencies not only consume time but also increase the risk of errors and audit findings.

What SoundPost Bridge Delivers

SoundPost Bridge is more than an integration tool. It is a financial data platform that delivers automation, traceability, and real-time insight. Core features include:

1. **Universal System Integration.** SoundPost Bridge connects Association Management Systems, eCommerce platforms, fundraising tools, and accounting software. With pre-built connectors and API-based integrations, data flows seamlessly from transactions to financials.
2. **Automated Transaction Processing.** Transactions from your AMS or eCommerce systems are ingested, mapped to your chart of accounts, and transformed into balanced journal entries with full posting controls and traceability.
3. **Advanced Revenue Recognition.** Membership dues, event fees, and sponsorships often involve complex revenue deferrals. SoundPost Bridge automates deferral schedules and recognition logic, ensuring that financial statements align with GAAP and audit expectations.
4. **Accounts Receivable Management.** The platform consolidates A/R across all systems, providing aging reports and statements without manual reconciliation.
5. **Real-Time Reconciliation.** Finance teams can compare accounting balances against source transactions in real time, catching discrepancies before they become month-end surprises.
6. **Reporting and Analytics.** With dashboards, transaction-level exports, and summary reports, SoundPost Bridge delivers the visibility finance teams need for board presentations and operational decision-making.

Transforming Finance Operations

With lean staff and complex revenue models, associations need automation to scale. SoundPost Bridge helps teams modernize operations, reduce audit risk with standardized rules, and close days faster.

Closing Notes

SoundPost Bridge was designed with association CFOs and controllers in mind. By bridging the gap between systems and strategy, SoundPost Bridge offers a new way forward for finance teams that have outgrown spreadsheets.
