

Global e-Invoicing

and VAT e-reporting made easy

eezi automates global e-invoicing and VAT e-reporting compliance at scale, helping finance and IT teams stay compliant across jurisdictions without rebuilding processes country by country.

Why is matter now?

The shift to real-time e-invoicing and tax reporting is accelerating. The challenge is not just compliance — it is staying ahead of fragmented local rules and growing operational overhead.

- Fragmented mandates:** countries have differing schemas, formats, networks, reporting flows, and clearance requirements
- Short runways and deadlines:** missed readiness can block invoicing, delay payment, and expose businesses to penalties
- Management overhead:** country-by-country compliance drains finance and IT resources and increases complexity

What VAT IT E-Invoicing delivers (via eezi)

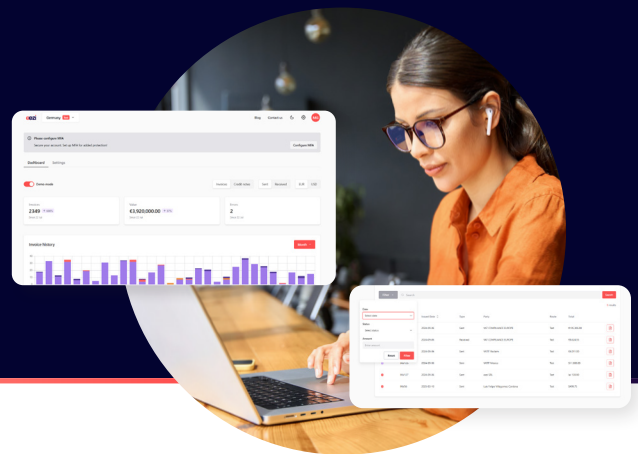

- ✔ **One platform for global compliance:**
eezi provides one scalable compliance layer for e-invoicing and VAT e-reporting across **60+ countries**, with additional mandates continuously being added as requirements evolve. Local to global scale with e-invoicing mandates is made possible through our rule logic framework.
- ✔ **Real-time visibility and control:**
AI error handling and real-time validation help customers move faster to compliance and avoid unnecessary impact to cash flow. The platform provides real-time invoice status tracking, proactive error handling, audit trails, compliant archiving, and continuous regulatory updates.
- ✔ **Built for AP and AR :**
eezi is **purpose-built to solve for e-invoicing in both AP and AR workflows**, across B2B, B2C, and B2G transactions. It is not built on the back of EDI; it is purpose-built to handle many-to-many data scenarios across different systems, formats, and mandate models. This gives customers one solution for inbound and outbound invoice compliance.
- ✔ **Human-readable invoice review:**
eezi provides a **clear, human-readable view of each invoice, complete with automatic language translation**, so reviewers can easily understand and approve the document. This helps bridge structured e-invoicing requirements with real-world finance approval processes. This point is also consistent with the broader deck language around translation support and human-readable outputs.
- ✔ **Local complexity handled centrally:**
eezi adapts invoice data to country-specific requirements, clearance models, and tax authority submission rules and connects directly to tax authority platforms and e-invoicing networks, simplifying compliance through a single connection.

Business outcomes

- | **Stay compliant at scale** across multiple jurisdictions through one platform
- | **Reduce operational complexity** by avoiding country-by-country rebuilds
- | **Improve efficiency** with automation and fewer exceptions
- | **Lower risk** through real-time validation, monitoring, and audit-ready records
- | **Minimize impact** without disrupting finance operations or cash flow

Why eezi?

- ✓ **Backed** by VATIT
- ✓ **25+ years** in international VAT
- ✓ **60+ countries** supported, with more announced
- ✓ **13,000+** clients served
- ✓ **38 offices** worldwide
- ✓ **50+ languages**
- ✓ **€700M VAT recovered** annually for clients
- ✓ **#1 e-Invoicing Software of 2024** — TaxTech 500
- ✓ **Certified and trusted:** PEPPOL Access Point | GENA Member
| ISO 27001 | SOC 2 | GDPR Compliant

Who is it for?

eezi is ideal for businesses that:

- | Require real-time data transmission to government platforms
- | Have limited internal bandwidth to manage regulatory updates
- | Are expanding into new regions and need fast compliance readiness

Let's assess your mandate exposure

Whether you are preparing for a specific country deadline or building a broader global compliance model, eezi helps you move faster with less risk. Review your countries, systems, and rollout priorities with our team to identify the fastest path to compliance.
