

Keep Job Costs Accurate with Arcoro and Sage Intacct

How the Arcoro Time & Sage Intacct integration keeps crews, costs, and systems in sync.

Arcoro Time* now connects bidirectionally with Sage Intacct, keeping your job costs accurate while reducing manual entry. All time entries flow automatically into Sage Intacct, mapped to the correct employee, project, and cost code, so job costs stay current as time is approved. Reference data flows back into Arcoro Time on a schedule you control, so crews always clock into jobs that are active and current.

The integration automatically handles:

Export of approved time entries to Sage Intacct, mapped to employee, project, cost code, and Time Entry Location

Sync of reference data, including employees, contractors, jobs, departments, labor classifications, business units, cost codes, and union information, from Sage Intacct into Arcoro Time

Clear, actionable error alerts if an export fails, so no records are ever silently dropped

How Data Flows

Arcoro Time → Sage Intacct: Time Entry Export

Data Category	Fields Synced to Sage Intacct
Time Entries	Employee, date, hours worked, project, cost code
Business Unit	Mapped directly to Sage Intacct's Time Entry Location (1:1)

Sage Intacct → Arcoro Time: Reference Data Sync

Data Category	Fields Synced to Arcoro Time
Employees & Contractors	Active employee and contractor records
Jobs & Projects	Active projects and cost codes
Departments & Business Units	Current department and business unit assignments
Labor Classifications	Labor classification records
Union Information	Union, union local, and union class

Syncs run on a defined cadence or on demand

"When our jobs sync automatically between Sage Intacct and Arcoro Time, we don't have to worry about crews clocking into a job that's already closed. This takes care of one of the most common issues we used to run into with our timekeeping."

**VP of Business Admin,
Roofing Company**

Accurate Job Costs and Clean Data for Every Team

Payroll & Time Administrators

- Eliminate manual re-entry of time records
- Spend less time reconciling employees, projects, and cost codes across systems
- Get clear alerts if an export fails, so you don't miss anything before payroll runs

Project & Job Costing Teams

- See job costs update as time is approved
- Reduce miscoded time from crews clocking into already-closed jobs
- Catch cost overruns early enough to course correct

Leadership

- Have confidence in job costing accuracy across every project
- Reduce errors and rework across payroll and job costing
- Keep field and office data connected

IT

- Eliminate manual file exports or custom scripts
- Get defined, scheduled sync cadence with visibility into errors
- Replace two disconnected systems with one connected data flow
