Based in Bristol (UK) and Austin, Texas (US), Brightpearl provides a retail operating system (ROS) for retailers and wholesalers. Its mission is clear: automate the back office so merchants can spend their time and money growing the business. Brightpearl's ROS includes financial management, inventory and sales order management, purchasing and supplier management, CRM, fulfillment, warehouse and logistics. In addition, the system has high-performing connectors to the major ecommerce platforms, including Magento, BigCommerce and Shopify. Brightpearl's platform manages over 10m transactions and $5bn of business a year.

In 2022, Brightpearl became part of the Sage Group plc, with the combination of Sage Intacct and Brightpearl creating a powerful solution for retailers and wholesalers. In July, Brightpearl had a makeover, becoming known as 'Brightpearl, by Sage'. The company continues to go from strength to strength while remaining fixed on its core mission: bringing innovative solutions that allow merchants to grow fearlessly.
