

## ScanForce Shipping for Sage Intacct

Shipping at your fingertips!

Complete the shipping process from any mobile device whether it's iOS or Android. Built directly into the ScanForce Inventory Automation solution, ScanForce Mobile Ship is easy to use and closes the gap from Picking to Shipping.

ScanForce built a solution that allows the user to ship an order from a mobile device. By seamlessly integrating this into the Inventory Automation solution, your shipping process has never been easier.

Increasing productivity, efficiency and accuracy are just a few key benefits to SF Mobile Ship. UPS and FedEx capabilities right out of the box make this solution a no-brainer for any organization using Sage Intacct and handling any items that need to be shipped.

ScanForce has leveraged the SF Management Portal where packaging details are kept and maintained. All packaging details tie back to each shipping carrier and are named accordingly...i.e. "UPS Small Box". The ScanForce Mobile Ship program allows the user to select which package items are going into and therefore the dimensions of that package. Weight is simply entered, and the shipping is complete!

ScanForce Mobile Ship knows to prompt the user to print the labels before they are able to move on to another order, ensuring that the correct shipping labels print for that order.

The program is smart enough to know which carrier to use based on what has been indicated at the Sales Order level. This takes the guessing out of the hands of the picker/shipper allowing them to move quickly and accurately.
