

Secure Payment Processing Your Way

The extensive payment processing solutions from OmniFund® are now available in Sage Intacct.

Fact Sheet: OmniFund® Sage Intacct Integration

Instant PCI Compliance With OmniFund® Sage Intacct Integration

OmniFund®, the industry-leading provider of PCI compliant payment processing solutions, and the first solution provider offering Payments as a Platform®, is fully integrated within the Sage Intacct platform. With this integration, Sage Intacct customers can seamlessly leverage the robust payment processing capabilities provided by OmniFund®, including their patent-pending process that enables businesses to be 100% Out of PCI Scope and 100% in PCI Compliance.

Fraud Prevention

We pro-actively identify fraudulent activities from consumers and prevent them from ever entering the system. Additionally, we manage “in-house” user fraud of the OmniFund® portal to prevent user related fraud where most fraud and breach incidents originate.

PCI Security

We take all necessary steps to ensure that our customer’s data is always safeguarded. Examples of things that we do to ensure data security at every point in the process are:

- > OmniFund® is Level 1 PCI-DSS Certified and a Certified Integrator and Reseller
- > PCI-DSS Certified ISA on staff
- > Point-to-point encryption
- > EMV
- > Tokenization
- > Client review and assistance with PCI documentation and on premise best practices at no charge.

Direct Payment Network Connections

We connect our customers directly with credit cards and banks, eliminating non-value add middlemen and insuring data integrity by “tunneling” each transaction directly to the network. The fewer points of transfer, the fewer opportunities for the data to be compromised and the lower overall costs for your business.

Expandability

OmniFund® Payments as a Platform® solution provides a robust, extensible platform to meet our customer needs. The ability for a user to incorporate additional features as they have need is seamlessly incorporated into the overall solution architecture.

Features:

- + Recurring/Subscription Management
- + Electronic Invoicing
- + Online Bill Payment Portal
- + Physical & Online Statements
- + Level II and III Card Processing
- + Chip Card/EMV
- + OmniFund® Passport
- + HIPAA Compliant
- + Advanced Admin Employee Controls
- + In Transit & At Rest Encryption
- + Secure Customer Vault
- + Tokenized Transactions
- + Seamless enablement with plugin
- + ...and so much more!
