

At the heart of Asset4000 lies a powerful asset register that provides a complete and accurate picture of your assets and all associated information for more informed decision making.

A single input screen supports the fast addition and update of assets.

The browser acts as a comprehensive search engine, providing full access to system features.

User-definable fields and description lines, as well as validated pick lists, make data entry easy and minimizes error.

Each asset record contains a unique identifier and provides the user with the facility to incorporate: existing analysis codes (e.g. category, cost center, department, company), multiple description lines, purchase cost, purchase and capitalization dates, asset life and depreciation rule, quantity, salvage value, grant value, and foreign currency amount.

Provides complete information on asset status, history, and location for audit trail purposes.

The audit file holds a history of all user actions, identifying which records were affected and the before/after detail.

No more importing journal files. A seamless integration minimizing error and reducing data entry time.

Easy to use journal interface with the Intacct GL.

No more manual entries.
